josueleit.dev@gmail.com

Transforming 20 years of entrepreneurship into technological innovation, I transitioned from a business owner to a FullStack Developer, materializing projects in service companies over the past three years. Graduated in Business Administration, I integrate business acumen with development practices, focusing on efficient solutions from prototyping, testing to deployment. I value environments that adopt Design Thinking and clean code practices under agile methodologies, always aiming for scalable codes and continuous innovations.

Work History and Key Competencies

SysMap Solutions / Cogna Education   March/2023 – Present
MD FullStack - University Course Creation System

- Frontend tasks include creating screens, components, and their rules.
- Backend tasks include creating and maintaining Endpoints, Microservices, and CRUD operations, as well as Kafka and AWS integrations (S3 and EC2), CI/CD Pipelines; Consuming Rest and GraphQL APIs, MySQL database.
- Unit, integration, and contract testing with Jest and Mocha.
- Technologies and Packages used: **Next.js, React, Hook Form, Express, Prisma, GraphQL, AWS, MySQL, Chakra. UI, Jest, Figma, SonarQube, Hexagonal Architecture, Jyra, Confluence.**

Arrumaê Cleaning Services   May/2020 - Fev/2023
JR FullStack - Arrumaê Android/ IOS app - Quick hiring services for domestic workers.

- Coded the frontend of Web application.
- I write the business algorithm to create fair automated prices.
- Participated of all steps of construction; it was a new small business.
- Worked with a squad of 4, me and a Senior Developer, we created all the steps using **React Native with Typescript, working with Figma resources, Backend with Firebase for MVP, posteriorly Node.js with PostgreSQL database**.

Just Simple – Shopify Store   Jan/2021 - Jun/2021.
